

EXPERIMENT-14

Create a Virtual Hard Disk and allocate the storage using VMware Workstation.

AIM

To create a Virtual Hard Disk (VHD) and allocate storage using VMware Workstation.

PROCEDURE:

Step 1: Open VMware Workstation and click Create a New Virtual Machine.

Step 2: Select Typical (Recommended) and click Next.

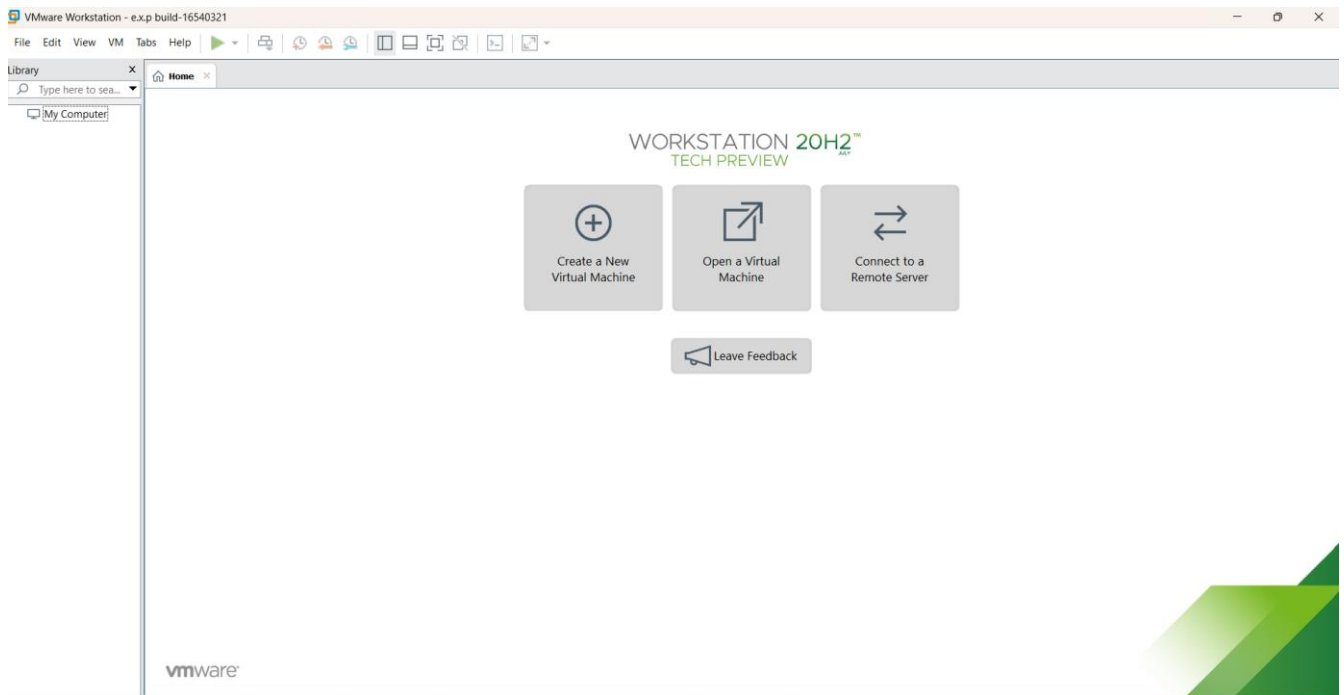

Step 3: Enter the virtual machine details (name and location) and proceed to the Specify Disk Capacity window.

Step 4: Enter the required hard disk size (for example, 15 GB) and choose either Store virtual disk as a single file or Split virtual disk into multiple files.

Step 5: Click Finish. The virtual hard disk will be created automatically.

Step 6: The specified storage will be allocated to the virtual machine.

STEP1:

STEP2:

STEP3:

New Virtual Machine Wizard

✕

Name the Virtual Machine
What name would you like to use for this virtual machine?

Virtual machine name:

Ubuntu (3)

Location:

C:\Users\HP\OneDrive\ドキュメント\Virtual Machines\Ubuntu (3)

Browse...

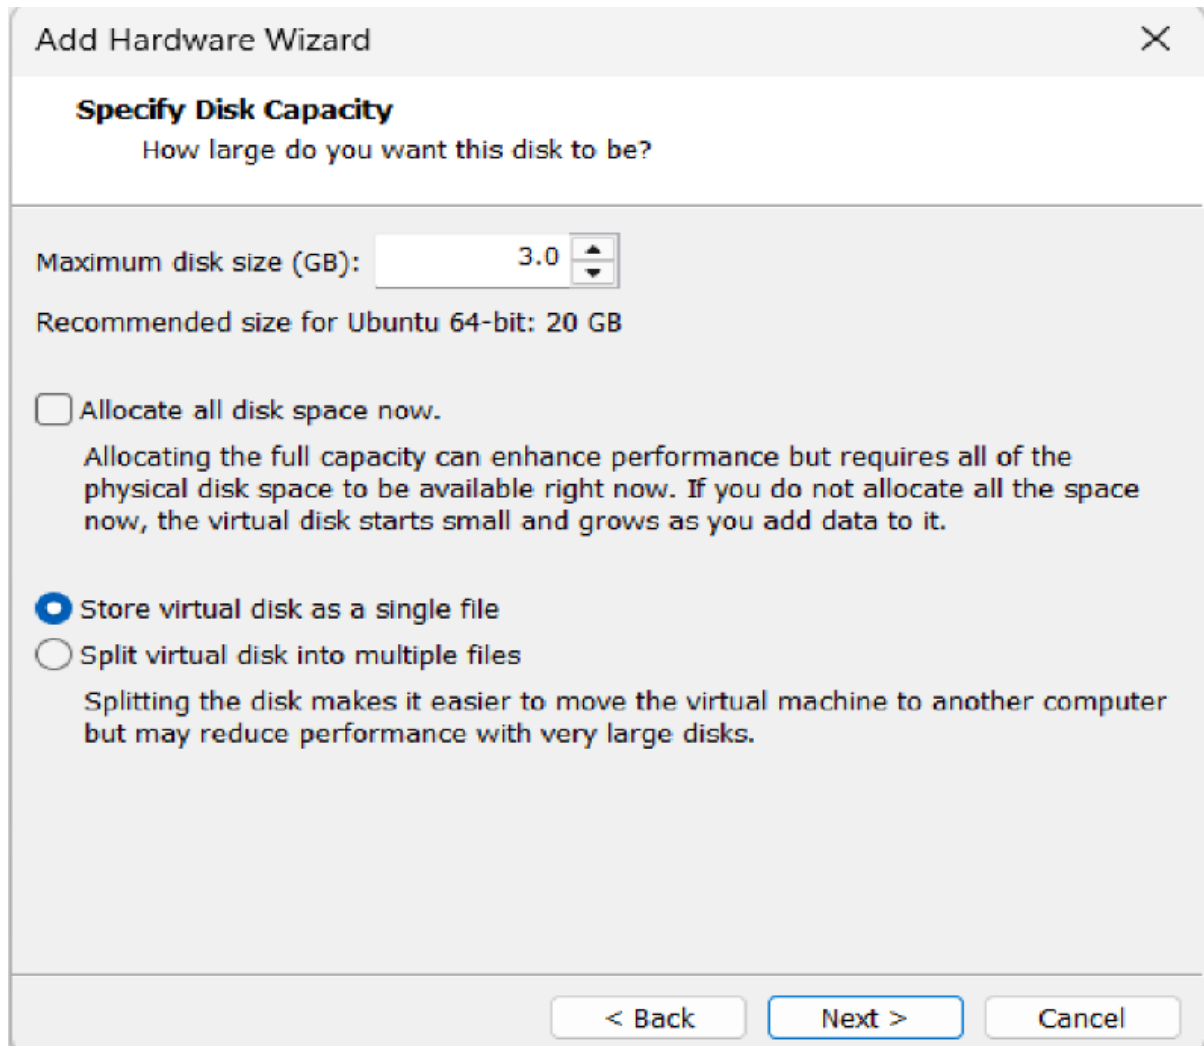

The default location can be changed at Edit > Preferences.

Cancel

STEP4:

The image shows a 'Specify Disk Capacity' dialog box from the 'Add Hardware Wizard'. It has a title bar with a close button. The main content area contains a text input for 'Maximum disk size (GB)' set to 3.0, a recommended size of 20 GB for Ubuntu 64-bit, and two radio button options: 'Allocate all disk space now' (unchecked) and 'Store virtual disk as a single file' (checked). The 'Store virtual disk as a single file' option is selected, and its description is visible. At the bottom, there are three buttons: '< Back', 'Next >', and 'Cancel'.

Add Hardware Wizard

Specify Disk Capacity
How large do you want this disk to be?

Maximum disk size (GB):

Recommended size for Ubuntu 64-bit: 20 GB

☐ Allocate all disk space now.
Allocating the full capacity can enhance performance but requires all of the physical disk space to be available right now. If you do not allocate all the space now, the virtual disk starts small and grows as you add data to it.

☒ Store virtual disk as a single file
☐ Split virtual disk into multiple files
Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

STEP5:

Add Hardware Wizard

×

Specify Disk File
Where would you like to store the disk file?

Disk file

One 5 GB disk file will be created using this file name.

Ubuntu 64-bit (4)-1.vmdk

Finish

Cancel

STEP6:

RESULT:

A Virtual Hard Disk of 15 GB was successfully created and storage was allocated using VMware Workstation. The allocated storage was verified in the virtual machine settings.
