

Experiment: Mark Sheet Processing System

Aim

To develop a simple Mark Sheet Processing System using Zoho Creator to demonstrate the Software as a Service (SaaS) model, enabling users to enter student marks and automatically calculate the average, percentage, rank, and overall performance through a cloud-based application.

Procedure

1. Log in to Zoho Creator and create a new application named Mark Sheet Processing System.
2. Create a form and add the required fields such as Student Name, Register Number, Subjects, Marks, Average, Percentage, Rank, and Overall Performance.
3. Configure field properties and create basic workflows to calculate the average, percentage, rank, and performance automatically.
4. Save the form, enter sample student records, and verify the generated reports.
5. Publish the application to demonstrate cloud-based access using the SaaS model.

INPUT:

The screenshot displays the Zoho Creator application interface for 'Marksheet processing'. The left sidebar shows the application name and a 'Marksheet processing Report' button. The main area displays a table titled 'Marksheet processing Report' with the following data:

Student name	Register number	semester	Subject 1	Mark	Subject 2	Mark
Abdul pinjari	12525426	2	DBMS	85	cloud computing	95

The table shows 1 of 1 records. The bottom status bar indicates the user is 'PINJARI ABD...' and the time is 10:50 AM on 03-08-2026.

Overall performance

OUTPUT:

Marksheet processing Report

Student name	Register number	semester
Abdul pinjari	12525426	2

Student name	Abdul pinjari
Register number	12525426
semester	2
Subject 1	DBMS
Mark	85
Subject 2	cloud computing
Mark	95
subject 3	Coomputer networks
Mark	95
Rank	25
Overall performance	good
